"A multidrug resistance transporter/serine protease gene is required
"A multidrug resistance transporter/serine protease gene is required
for prestalk specialization in Dictyostelium.";
Genes Dev. 9:1111-1122(1995).
-;- FUNCTION: Intercellular communication via tagB may mediate
integration of cellular differentiation with morphogenesis.
-;- SIMIDARITY: In the N-terminal section; belongs to peptidase family
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        -!- SIMILARITY: IN THE C-TERMINAL SECTION; BELONGS TO THE ATP-BINDING TRANSPORT PROTEIN FAMILY (ABC TRANSPORTERS). MDR SUBFAMILY. -!- SIMILARITY: STRONG, TO TAGC.

and other extracellular thermostable serine proteases from
hyperthermophilic microorganisms.";
Meth. Enzymol. 330-393(2001).
I- FUNCTION: Has endopeptidate activity toward caseins, casein
fragments including alpha-S1-casein and synthetic peptides.
I- SIDGELLUAR LOCATION: Cell envelope associated.
I- PTM: LWM pyrolysin seems to be produced by autoproteolytic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Archaea; Buryarchaeota; Thermococci; Thermococcales; Thermococcaceae;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 STRAIN=Vcl / DSM 3638 / ATCC 43587 / JCM 8422;

-!- FUNCTION: Subtilisin is an extracellular alkaline serine protease, it catalyzes the hydrolysis of proteins and peptide anides.

-!- CATALYTIC ACTIVITY: Hydrolysis of proteins with broad specificity for peptide bonds, and a preference for a large uncharged residue
                                                                                                                                                                                                                                                                                                                                        13 AQNNYGLYGQGQVVAVADTGLDTGRNDSSMHEAFRGKITALYALGRINNANDPNGHGTHV

Muclectide and derived amino acid sequence of the subtilisin from antarctic psychrotroph Bacillus TA39.";

Biochim. Biophys. Acta 1131:111-113(1992).

C. I- FUNCTION: Subtilisin is an extracellular alkaline serine protease, it catalyzes the hydrolysis of proteins and peptide amides.

C. CATALYTIC ACTIVITY: Hydrolysis of proteins with broad specificity for peptide bonds, and a preference for a large uncharged residue in P1. Hydrolyzes peptide amides.

C. I- COPACTOR: Blinds I calcium ion per subunit (Potential).

C. I- SUBCELLULAR LOCATION: Secreted.

C. MISCELLANEOUS: Still active at temperatures close to 0 degrees constituted in has a marked heat lability.

C. MISCELLANEOUS: Secretion of subtilisin is associated with onset of sporulation, and many mutations which block sporulation at early stages affect expression levels of subtilisin. However, subtilisin is not necessary for normal sporulation.

C. SIMILARITY: Belongs to peptidase family S8.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This SWISS-PROT entry is copyright. Calcium-mediated thermostability in the subtilisin superfamily: the crystal structure of Bacillus Ak.1 protease at 1.8-A resolution.";
J. Mol. Biol. 294:1027-1040(1999).
I- COFACTOR: Binds 3 calcium ions and 1 sodium ion per subunit.
I- SUBCELMUAR LOCATION: Secreted.
I- MISCELLANBOUS: Has a pH optimum of 8.5, a temperature optimum of 75 degrees Celsius.
I- SIMILARITY: Belongs to peptidase family 88.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SEQUENCE FROM N.A.

Taga, a putative serine protease/ABC transporter of Dictyostelium

Taga, a putative serine protease/ABC transporter of Dictyostelium

Taga, a putative serine protease/ABC transporter of Dictyostelium

That is expressed at the onest of development and is required for the
differentiation of a subpopulation of prespore cells.";

Submitted (MAY-2000) to the EMBL/GenBank/DDBJ databases.

I. SIMILARITY: BELONGS TO THE ABC TRANSPORTER FAMILY.

This invention describes novel Bacillus sp. alkaline proteases useful in detergent compositions, especially in laundry, bleaching or automatic dishwasher detergents. The novel proteases have an increased detergency $ (34 - 38%) compared to prior art alkaline proteases (31 and 23%). This sequence represents a fragment of the alkaline protease A-1 from Bacillus sp NCIB12289 described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 NDVARGIVKADVAQSSYGLYGQGQVVAVADTGLDTGRNDSSMHEAFRGKITAIYALGRTN

The novel proteases have an increased detergency $ (34 - 38$) compared to prior art alkaline proteases (31 and 23$). This sequence represents a fragment of the alkaline protease KR43 from Bacillus sp strain KSW-KR43 which is used to create the modified protease represented in AAMS0090.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            566
                                              The invention relates to alkaline proteases produced by strains of Bacillus. The proteases ability to digest casein is not inhibited by oleic acid and they have a high stability to oxidising agents. The alkaline protease of the invention has the following properties: (a) it is active over the pH range 4-13 and has at least 80% of its optimum activity over the pH range 6-11; (b) after 30 minutes at 40 deg: C it is stable over the pH range 6-11; (c) its isoelectric point is 8.9-9.1; (d) its ability to digest casein is not inhibited by oleic acid; (e) it has molecular weight about 43,000 by SDS-PAGE. The alkaline proteases can be used as enzymes in washing compositions for use in automatic dishwashers and for washing clothes. The stability to oxidising agents allows the enzyme to be an effective component of washing compositions including bleaches. The present sequence represents an alkaline protease. (Updated on 20-MAR-2003 to correct DR field.)
